Build a Complete Separate Admin Website for PromptXHubl

Act as a senior full-stack developer, Firebase architect, UI/UX designer, and security engineer.

Build a complete, production-ready, responsive Admin Dashboard for a website named **PromptXHubl**.

IMPORTANT PROJECT REQUIREMENT:

This Admin Website must be a completely separate website from the public PromptXHubl website.

The public website and Admin Website must connect to the SAME Firebase project and use the SAME Firestore database and Firebase Storage.

The public website URL and Admin Website URL will be different Netlify deployments.

Do not build a static dashboard or demo. Every button, form, CRUD operation, upload feature, and publishing workflow must work.

I will manually enter my Firebase configuration. Never invent Firebase credentials or expose private keys.

---

1. ADMIN PANEL DESIGN

Create a premium modern dark-themed dashboard.

Design:

- Deep navy and black background.
- Purple and blue gradient accents.
- Professional dashboard cards.
- Clean typography.
- Modern icons.
- Rounded corners.
- Responsive sidebar.
- Mobile-friendly navigation.
- Smooth and lightweight interactions.

Admin dashboard should look like a professional SaaS content management system.

Website branding: PromptXHubl Admin

Create a professional logo and favicon.

---

2. ADMIN LOGIN AND SECURITY

Create a secure admin login page.

Login requirements:

- Firebase Authentication email/password login.
- No public registration.
- Only authorized admins can enter.
- Add logout functionality.
- Add forgot-password functionality.
- Protect all admin routes.
- Keep admin session secure.
- Redirect unauthenticated users to login.
- Verify admin permissions using Firestore Security Rules or trusted backend authorization.
- Never trust frontend-only role checks.

Use this admin authorization structure:

/admins/{uid}

Only authorized admin UIDs should have admin access.

Do not grant admin access merely because someone knows the admin URL or email address.

I will manually add authorized admin users to Firebase.

---

3. DASHBOARD HOME

Create a professional overview dashboard.

Show live statistics from Firestore:

- Total APK Apps.
- Total APK Games.
- Total Photo Editing Prompts.
- Total Video Templates.
- Total Published Items.
- Total Draft Items.

- Total Unpublished Items.
- Total Prompt Loves.

Create separate statistic cards.

Also show:

- Recently added content.
- Recently updated content.
- Recent publishing activity.
- Quick Add buttons.
- Content status overview.

All statistics must be real Firebase data, not hardcoded demo values.

---

4. APK MANAGER

Create a complete APK management system.

Two categories only:

1. MOD Apps
2. MOD Games

Admin can:

- Add APK.
- Edit APK.
- Delete APK.
- View APK details.
- Publish APK.
- Unpublish APK.
- Save as draft.
- Search APKs.
- Filter by category.
- Sort by latest and oldest.
- Manage uploaded images.

APK form fields:

1. App/Game Name.
2. Slug.
3. App Icon.

4. Cover Image.
5. Screenshots.
6. Short Description.
7. Full Description.
8. Category: MOD Apps or MOD Games.
9. Version.
10. File Size.
11. Android Requirements.
12. Download URL.
13. Official Source URL.
14. Developer Name.
15. License/Distribution Permission Information.
16. SEO Title.
17. SEO Description.
18. SEO Tags.
19. Featured Status.
20. Publishing Status.

Download URL requirements:

- Validate URL format.
- Show a preview of the destination.
- Require admin confirmation before publishing.
- No fake download links.
- No forced redirects.
- No automatic downloads.

Only allow legally distributable APKs with appropriate rights and permissions. Do not publish cracked premium apps, pirated applications, malware, unauthorized paid-feature unlocks, or cheating tools.

---

5. PHOTO EDITING PROMPT MANAGER

Create a complete Photo Editing Prompt CMS.

Admin can:

- Add prompt.
- Edit prompt.

- Delete prompt.
- Preview prompt.
- Publish prompt.
- Unpublish prompt.
- Save draft.
- Feature prompt.
- Search prompts.
- Filter by category.
- Sort prompts.

Prompt form fields:

1. Prompt Title.
2. URL Slug.
3. Preview Image.
4. Short Description.
5. Full Description.
6. Complete Prompt Text.
7. Category.
8. AI Model/Platform.
9. Instructions for Using the Prompt.
10. SEO Title.
11. SEO Description.
12. SEO Tags.
13. Featured Status.
14. Publishing Status.

Image upload:

- Upload from Android or desktop.
- Preview image before saving.
- Support Firebase Storage.
- Validate image type.
- Limit image size.
- Allow image replacement.
- Provide image URL storage.

SEO tag generator: Create an AI-assisted SEO tag generation interface.

Admin enters the prompt title and description, then clicks Generate SEO Tags.

Generate relevant, natural, unique SEO tags.

Show generated tags separately in editable input fields.

Never generate misleading or unrelated tags.

Prompt text must be stored separately from the description.

The public website must be able to copy the full prompt text.

---

6. VIDEO TEMPLATE MANAGER

Create a complete Video Templates CMS.

Admin can:

- Add video template.
- Edit template.
- Delete template.
- Preview template.
- Publish/unpublish.
- Save draft.
- Feature template.
- Search templates.
- Filter by platform.
- Sort templates.

Form fields:

1. Template Title.
2. URL Slug.
3. Thumbnail Image.
4. Preview Video URL (optional).
5. Short Description.
6. Full Description.
7. Editing Platform.
8. Template Category.
9. Direct Template URL.
10. Downloadable File URL.
11. File Format (ZIP, MP4, etc.).

12. File Size.
13. Usage Instructions.
14. Copyright/License Information.
15. SEO Title.
16. SEO Description.
17. SEO Tags.
18. Featured Status.
19. Publishing Status.

IMPORTANT:

Support both link types:

A. Direct Template Link B. Downloadable File Link

Both are optional individually, but at least one valid link must be provided before publishing.

On the public website:

- Show Use Template when a direct template URL exists.
- Show Download File when a downloadable file URL exists.

Never create fake links or unauthorized copyrighted downloads.

---

7. CATEGORY MANAGER

Create a Category Management module.

Admin can:

- Add category.
- Edit category.
- Delete category.
- Upload category image.
- Change category name.
- Add category description.
- Set SEO title.
- Set SEO description.
- Set category status.

Content types:

- MOD Apps.

- MOD Games.
- Photo Editing Prompts.
- Video Templates.

Prevent deleting categories that still contain published content unless the admin first reassigns or removes that content.

---

8. CONTENT MANAGEMENT TABLE

Create separate management tables for:

- APK Apps.
- APK Games.
- Photo Prompts.
- Video Templates.

Each table must show:

- Thumbnail.
- Title.
- Category.
- Created Date.
- Updated Date.
- Status.
- Featured Status.
- Actions.

Actions:

- View.
- Edit.
- Publish.
- Unpublish.
- Delete.

Add:

- Search.
- Filters.
- Sorting.
- Pagination.
- Confirmation dialogs before deletion.

Use real Firebase data.

---

9. MEDIA LIBRARY

Create a Media Library for Firebase Storage.

Features:

- Upload images.
- Upload thumbnails.
- Upload APK icons.
- Upload screenshots.
- Upload preview videos when supported.
- Upload permitted template files when appropriate.
- Preview media.
- Copy media URL.
- Delete unused media.
- Search media.
- Filter by file type.

Validate file extensions, MIME types, and file size.

Use secure Storage rules.

Do not allow arbitrary executable uploads or unsafe files.

---

10. HOMEPAGE FEATURED CONTENT MANAGER

Create a homepage management module.

Admin can control:

- Featured banner title.
- Banner description.
- Banner image.
- Banner button label.
- Banner destination.
- Banner visibility.
- Banner order.

Allow admin to select featured APKs, prompts, and video templates.

Changes must appear on the public website without requiring code changes.

---

11. LOVE AND POPULAR CONTENT MANAGEMENT

Create a simple engagement management module.

Show:

- Prompt love counts.
- Most loved prompts.
- Most viewed content, if reliable view tracking is configured.
- Popular content.

Do not allow admin to create fake engagement numbers.

Protect public engagement actions against repeated abuse.

---

12. SEO MANAGER

Create a global SEO settings page.

Admin can edit:

- Website title.
- Website description.
- Default SEO keywords.
- Default social sharing image.
- Canonical domain.
- Organization information where accurate.
- Social media links.
- Sitemap settings.

Each content item must have separate SEO fields.

Only published public pages should be included in the sitemap.

Do not index:

- Admin pages.
- Login pages.
- Draft pages.
- Private pages.
- Empty pages.

Support sitemap.xml and robots.txt through the public website deployment.

---

13. ADSENSE SETTINGS

Create an AdSense configuration section.

Publisher ID supplied by the website owner:

pub-8520963162864667

Requirements:

- Display publisher ID in settings.
- Allow the owner to enable or disable AdSense integration.
- Do not duplicate AdSense scripts.
- Do not create fake ad units.
- Support ads.txt configuration.
- Keep ads disabled until approval and manual activation.
- Do not put ads near download, copy, or navigation buttons in a misleading way.

Never claim AdSense approval is guaranteed.

Do not expose private account credentials.

---

14. SITE SETTINGS

Create a complete settings module.

Admin can update:

- Website name.
- Logo.
- Favicon.
- Contact email.
- About text.
- Footer text.
- Social media links.
- Homepage banner.
- Maintenance mode.
- Public website URL.
- Admin website information.

Default website name:

PromptXHubl

Default contact email:

sojib76577@gmail.com

Do not invent other business contact details.

---

15. FIREBASE DATABASE STRUCTURE

Use the SAME Firebase project as the public PromptXHubl website.

Use these Firestore collections consistently:

/admins/{uid} /apkApps/{itemId} /photoPrompts/{promptId} /videoTemplates/{templateId} /categories/{categoryId} /siteSettings/{documentId} /loveCounts/{itemId}

Suggested document fields:

Common fields:

- title
- slug
- description
- imageUrl
- category
- status
- featured
- createdAt
- updatedAt
- seoTitle
- seoDescription
- seoTags

Add the relevant type-specific fields for APKs, prompts, and templates.

Use server timestamps where appropriate.

Avoid duplicate documents.

Use pagination and efficient queries.

Do not create a different collection naming convention from the public website.

If the public website already uses a collection, reuse the correct existing collection and field names rather than creating conflicting duplicates.

---

16. FIREBASE SECURITY RULES

Security is critical.

Create secure Firestore and Storage rules.

Requirements:

- Public visitors can read only published public content.
- Only authorized admins can create content.
- Only authorized admins can update content.
- Only authorized admins can delete content.
- Only authorized admins can upload or delete media.
- Only authenticated authorized admins can read private admin data.
- No public registration or admin role self-assignment.
- Validate allowed fields and data types where practical.
- Do not use unrestricted allow read/write rules.
- Do not expose service account credentials.

Provide the complete rules separately with setup instructions.

---

17. ADMIN MOBILE RESPONSIVENESS

The Admin Website must work perfectly on Android phones.

Mobile layout:

- Collapsible sidebar or drawer.
- Dashboard cards in responsive grid.
- Tables adapt to mobile screens.
- Forms use full-width inputs.
- Upload controls work on Android.
- Buttons are easy to tap.
- No horizontal overflow.
- Sticky header where appropriate.

Desktop layout:

- Fixed sidebar.
- Main dashboard content.
- Responsive tables.
- Professional admin navigation.

---

18. ERROR HANDLING AND VALIDATION

Every form must have:

- Required field validation.
- URL validation.
- Image validation.
- File size validation.
- Loading state.
- Success message.
- Error message.
- Duplicate submission prevention.

Before deletion:

- Show a confirmation dialog.

After successful publishing:

- Show a confirmation message.

If Firebase is unavailable:

- Show a useful error message.
- Do not silently pretend the data was saved.

---

19. ADMIN SIDEBAR NAVIGATION

Create these sidebar items:

1. Dashboard
2. APK Manager
3. Photo Prompt Manager
4. Video Template Manager
5. Category Manager
6. Media Library
7. Featured Content
8. Engagement
9. SEO Manager
10. AdSense Settings
11. Site Settings
12. Logout

All sidebar links must work.

---

20. FINAL DELIVERY REQUIREMENTS

Build the complete Admin Website.

Do not stop after creating the dashboard UI.

Implement:

- Firebase Authentication.
- Admin authorization.
- Firestore CRUD operations.
- Firebase Storage uploads.
- APK management.
- Photo prompt management.
- Video template management.
- Category management.
- Featured content.
- SEO settings.
- AdSense settings.
- Site settings.
- Mobile responsive dashboard.

Before completing:

1. Test admin login.
2. Test unauthorized access protection.
3. Test adding APKs.
4. Test editing and deleting APKs.
5. Test adding photo prompts.
6. Test prompt image uploads.
7. Test SEO tag generation interface.
8. Test adding video templates.
9. Test both template link types.
10. Test category management.
11. Test publishing and unpublishing.
12. Confirm public website receives published content from the same Firebase database.

13. Confirm drafts are not publicly visible.
14. Test Android responsiveness.
15. Verify Firebase security rules.

Create a README with:

- Firebase configuration instructions.
- Admin account authorization instructions.
- Firestore collection structure.
- Firebase Storage setup.
- Netlify deployment instructions.
- How to connect this Admin Website to the existing public PromptXHubl website.

IMPORTANT:

- This is a separate Admin Website.
- Do not rebuild or overwrite the public website.
- Do not create a new Firebase project.
- Reuse the existing PromptXHubl Firebase project.
- I will manually enter Firebase configuration.
- Keep the Admin Website compatible with GitHub and Netlify.

Final result: A fully working, secure, professional, mobile-friendly PromptXHubl Admin Website.
